

# 7Qubes Write Up

Follow instructions on Haoli's GitHub and also the set up guide she sent for the postSQL.

1. <https://github.com/7qubes/plutus/tree/haoli>
  1. <https://packaging.python.org/tutorials/installing-packages/> Installs pre-requisite packages
  2. <https://packaging.python.org/guides/installing-using-pip-and-virtual-environments/> Installs virtual environments.
2. <https://github.com/7qubes/plutus/blob/haoli/setup.md> set up guide for the database.
  1. <https://docs.microsoft.com/en-us/windows/wsl/tutorials/wsl-database>  
Install the necessary dependencies using listed on this wsl website, but use home-brew instead: "brew install [dependency]"
    1. <https://brew.sh/>
    2. If you encounter zsh:command not found, follow this link: <https://github.com/Homebrew/brew/issues/10187>
3. Change requirements.txt to this:

```
amqp==5.0.2
